Substrate 快速入门与实战

讲师: Bryan

第四节课

Substrate Kitties V2 实现

设计

- Storages:
- Kitties: map u32 => Kitty
- KittiesCount: u32
- OwnedKitties: map (AccountId, u32) => u32
- OwnedKittiesCount: map AccountId => u32
- Dispatchable methods:
 - create()
 - breed(kitty1: u32, kitty2: u32)

- 数据结构:
 - struct Kitty
 - dna: [u8; 16]

类型解耦

链上升级

链上升级

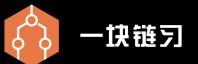

- 编译wasm
- WASM_TARGET_DIRECTORY=\$(pwd)
 WASM_BUILD_TYPE=release cargo build
- 使用治理模块提案升级
 - 测试网用 sudo 来升级

polkadot.js

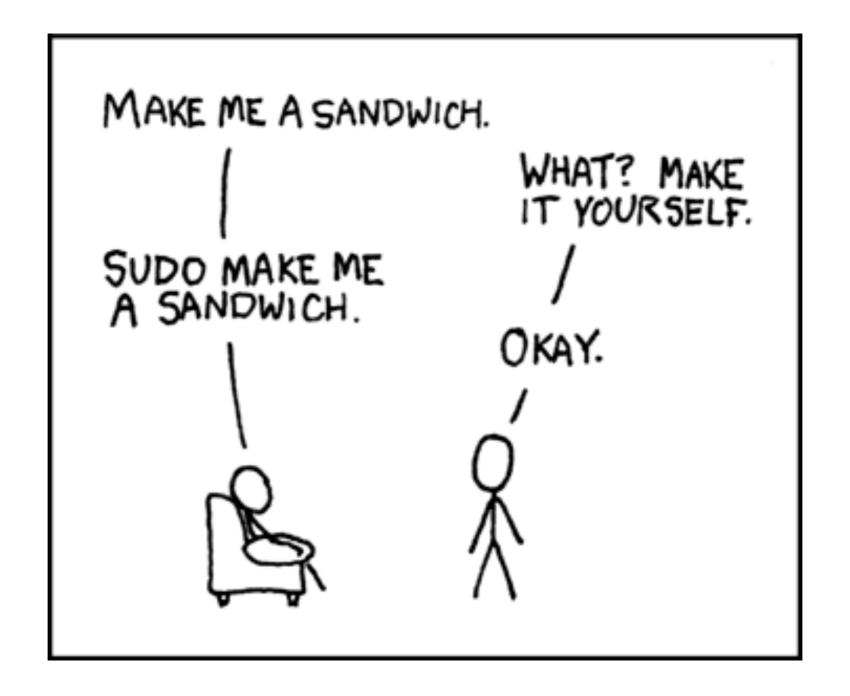

polkadot.js

- Parity写的Substrate & Polkadot 的JS SDK
- Typescript, RxJS
- 文档:
- https://polkadot.js.org

pallet-sudo 代码分析

pallet-sudo

作业

作业

- 重构 create,使用新的帮助函数
- 完成 combine_dna
- 设计加密猫模块 V3

作业

- V3需求
 - transfer kitty 转移猫
- 要求复杂度必须优于 O(n)

额外作业

- 创建新的polkadot apps项目
 - https://github.com/polkadot-js/apps/ tree/master/packages/app-123code
- 设计如何在substrate中实现树形结构
